

Precision Hand Crimpers

A crimp tool provides reliable crimp termination of contacts for mission-critical applications. A hand crimper is suitable for contacts from size #12 to #22D. For production environments, pneumatic crimpers are also available.

Our tools feature an eight impression crimp, which ensures maximum tensile strength between wire and contact. Their cycle controlled ratchets are consistent and accurate and do not permit half crimps, ensuring complete and precise crimping every time.

The tool frames have a built-in 8-step selector knob for easy adjustment of crimp depth to accommodate the size of wire being used. Data plates on positioners provide setting information specific to the size of wires and contacts being used.

There are a variety of crimp tools and positioners available to fit the various sized contacts within each connector series. To find the correct tool and positioner for your contacts, see the specific contact table for tooling part numbers.

Features & Benefits

- Eight impression precision crimp for tensile strength
- Adjustable crimp depth selector knob
- Accepts turret positioners for application versatility
- Suitable for all crimp contacts, #12 to #22D
- Pneumatic model available for production environments
